

F ROC comparison on matched prediction windows

Out-of-fold EMSA-HI and prespecified score-based baselines

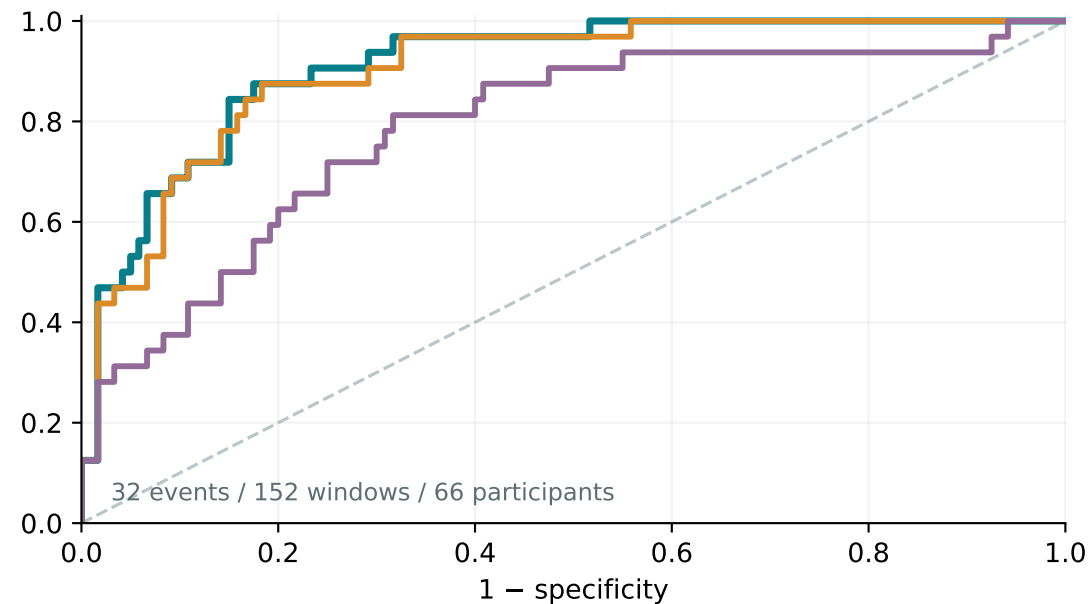

A Next high HI

AUROC (participant-cluster 95% CI)

EMSA-HI	0.894 (0.823–0.948)
LOCF / current HI	0.884 (0.808–0.940)
Two-point linear extrapolation	0.776 (0.679–0.857)

B Next extreme HI

AUROC (participant-cluster 95% CI)

EMSA-HI	0.910 (0.837–0.962)
LOCF / current HI	0.901 (0.819–0.959)
Two-point linear extrapolation	0.786 (0.667–0.879)

LOCF and current HI have identical ranking (both use HI at t2). Clinical-variable out-of-fold scores were unavailable.
